

# Marine Switchgear Systems

**W**ard's Marine Electric has partnered with Kohler® Power Systems and A/Sea Power to provide a single source for a switchboard, generators and shore power converter. The Ward's Marine Electric Marine Switchgear Systems switchboard utilizes a Kohler® PLC based Generator and Switchboard Management System. With this system, the switchboard, generators and shore power converter form an integrated system for reliability and ease of operation. Kohler's worldwide presence and service capabilities assure the customer of generator and switchboard service or assistance anywhere he may travel.

- Switchboard can be easily operated in manual mode, providing fail-safe operation.
- The modular switchboard enclosure can be configured 3, 4 or more sections wide. Some sections can be separated for ease of installation, especially for retrofit projects.
- Completely enclosed main power bus system.
- Tilt-out distribution circuit breakers racks for ease of running cables and connecting to neutral and ground buses.
- Distribution circuit breakers can be either 63AF or 125AF and can be easily intermixed on the distribution bus system.
- All indicator lights are LED for long life.
- LED strip interior lighting activated by individual door switches.
